Professor Emmanuel Tsesmelis Senior Physicist, Director-General Unit, CERN Visiting Professor, Department of Physics, University of Oxford

Emmanuel Tsesmelis is an experimental particle physicist with a career spanning scientific research, academic teaching, science communication, international relations and management at CERN and at several universities. He is a Senior Physicist and Deputy Head of International Relations in CERN's Director-General Unit and a Visiting Professor in Particle and Accelerator Physics at the University of Oxford. He is an elected Fellow of the Australian Institute of Physics and a supernumerary member of Jesus College, Oxford.

He undertook his studies in Athens, Melbourne and Dortmund. He completed his Ph.D. studies in experimental particle physics at the University of Dortmund, where he worked on the search for the charged Higgs boson at the UA2 experiment at CERN. From 1993 to 1998, he worked within CERN's neutrino programme searching for quantum mechanical oscillations of one flavor of neutrino to another – in the NOMAD and SPY Collaborations and also on the design team for the neutrino beam to Gran Sasso, CNGS. In 1998 he joined the CMS Collaboration at CERN's Large Hadron Collider (LHC), one of the two experiments that have announced the discovery of the Higgs boson, and for the period 2005-2008 he was Head of the LHC Experimental Areas. As a result of his research, he has co-authored a large number of scientific papers in refereed journals together with international collaborators.

Emmanuel Tsesmelis was a member of the CERN Directorate Office during the period 2009-2013, which played a key advisory and support role for the Director-General and Senior Management by providing a source of policy and strategy counsel. As of 2004, he has also been providing strategic advice to CERN

Directors-General on international relations of the Organization. In this capacity, he has been responsible for bringing into collaboration with CERN scientists from countries that are in the process of developing their particle physics communities.

He also lectures in physics and contributes to public engagement events in science, technology and innovation, most notably related to CERN's Non-Member State Summer Student Programme and High School Teacher Programme as well as to public science events internationally.
